

# This or That? - "To extract or to save"

**5 MAR 2024**

**TUESDAY**

**6.30 - 8.30PM**

NUCOHS Level 9 Auditorium

**Target Audience:**

**BDS Graduates (Class of 2020 - 2023)**

Implant replacement is a predictable replacement option for missing teeth. Given the commercialisation of implant dentistry, fewer teeth are being saved while more teeth are being extracted to place implants. However, with more emerging evidence of peri-implant diseases and their related complications, are implants always the best option to replace periodontally compromised teeth?

"To extract or to save?" This lecture and sharing session aims to discuss considerations to prognosticate periodontally involved teeth, limitations of periodontal treatment and when these teeth may be indicated for extraction. We will look at literature evidence and cases to help navigate this decision-making process. Through the series of ITI lectures, our goal is to promote holistic implant treatment planning and patient management.

**Learning Objectives**

In this session, participants will:

- Learn about the decision-making process behind extracting or keeping periodontally compromised teeth.
- Understand the rationale and indications of saving periodontally compromised teeth.
- Gain insights on the holistic management of periodontally compromised patients and implant therapy.

**SPEAKERS**

**DR SOPHIA CHOO**

POSTGRADUATE  
PERIODONTICS RESIDENT

**DR JEREMY LING**

POSTGRADUATE  
PERIODONTICS RESIDENT

**More Information**

Participants will receive two CPE points and a bento pack at the session.
